Quantus

How a post-quantum Layer-1 ("quantum-secure encrypted money") used a 5-week Zealy sprint series to launch its community from zero — with a product-led quest mix, not just social farming.

6,678	31,697	85.9%	$2,500
Community members	Verified quest completions	Verified-success rate	USDC across 5 weekly sprints

The campaign

Quantus is a deep-tech protocol — a Substrate-based, Proof-of-Work Layer-1 built from the ground up with NIST post-quantum cryptography. To bootstrap a real community around it, Quantus ran **"The Quantus Era"**: five consecutive **weekly leaderboard sprints** (Jan 26 – Mar 12, 2026), each with a **$500 USDC reward pool** raffled and ranked across a top-10 reward zone. The series took the community from a standing start to **6,678 members** and **31,697 verified actions** in roughly seven weeks.

What the community actually did

A healthy blend of social amplification **and** genuine product engagement — verified actions by type.

85.9%

of claims passed verification — **31,697 of 36,898** screened successfully. Real, anti-cheat-filtered actions around a technical protocol, not farmed noise.

A product-led quest mix

Beyond the usual follow/like quests, Quantus drove members to **download the app** (759), **follow the project on GitHub** (1,021), **watch & like explainer videos** (1,010), **star it on CoinGecko** (480) and pass **knowledge quizzes** — turning a quest campaign into a top-of-funnel for an actual product.

Why it worked — and where the next lever is

- **Launch as a sprint series, not a single event.** Five back-to-back weekly sprints built a habit loop and compounded participation — nearly every member completed at least one verified quest.
- **Product engagement, not just vanity social.** App installs, GitHub follows, video views and education quizzes gave Quantus real funnel signal — the rare case where quest actions map to product adoption.
- **High completion quality.** An 85.9% verified-success rate shows the anti-cheat layer kept the leaderboard clean — important when real USDC is on the line for a deep-tech audience.
- **The opportunity: re-activation.** Activity was concentrated in the Jan–Mar launch window and referral share sat at ~26%. A recurring quest cadence plus referral incentives would turn the launch spike into sustained, self-propelling growth.
